

# Math 1231 Summer 2024

## Mastery Quiz 3

### Due Wednesday, July 10

This week's mastery quiz has three topics. Everyone should submit M2 and S1, but if you already have a 4/4 on M1 (check Blackboard!) you don't need to submit it again.

Feel free to consult your notes, but please don't discuss the actual quiz questions with other students in the course.

Remember that you are trying to demonstrate that you understand the concepts involved. For all these problems, justify your answers and explain how you reached them. Do not just write "yes" or "no" or give a single number.

Please turn in this quiz in class on Wednesday. You may print this document out and write on it, or you may submit your work on separate paper; in either case make sure your name is clearly on it. If you absolutely cannot turn it in in person, you can submit it electronically but this should be a last resort.

#### **Topics on this quiz:**

- Major Topic 1: Limits
- Major Topic 2: Computing derivatives
- Secondary Topic 1: Definition of the derivative

**Name:**

Name: \_\_\_\_\_

## Major Topic 1: Limits

(a)  $\lim_{x \rightarrow 2} \frac{1}{x-2} - \frac{3}{(x+1)(x-2)}$

(b)  $\lim_{x \rightarrow \infty} \frac{3x^2 - 2x + 1}{x^2 - 1}$

(c)  $\lim_{x \rightarrow 1} \frac{3x^2 - 2x + 1}{x^2 - 1}$

## Major Topic 2: Computing derivatives

(a) Compute the derivative of  $f(x) = (x^4 + 2x)(1 - 2\sqrt{x})$ .

(b) Compute the derivative of  $g(x) = \frac{5x^2 + 7x}{x^3 - \sqrt[3]{x} + 8}$ .

(c) Compute the derivative of  $h(x) = \frac{6}{x^5}$ .

## Secondary Topic 1: Definition of the derivative

(a) If  $f(x) = 2x^2 - 5x$ , compute  $f'(2)$  directly from the limit definition.

(b) If  $g(x) = \frac{1}{x-3}$ , compute  $g'(a)$  directly from the limit definition.
